UI/UX CASE STUDY · NUTRITION TRACKER APP

ByteBalance

A nutrition tracker that makes healthy eating simple, familiar and motivating, one logged meal at a time.

ROLE	TIMELINE	TOOL	CATEGORY
UI/UX Designer	40 hours	Lovable	Health & nutrition

01 Overview

The problem

Tracking food often feels like a chore: busy screens, confusing numbers and too many steps. Many people give up before healthy habits form.

The goal

Help people build and keep a healthy lifestyle by making it quick to log meals and water, see daily goals at a glance, and stay motivated.

My role

End-to-end design and build: user flows, information architecture, visual and interaction design, and the working prototype in Lovable.

02 Guiding decision: simple and familiar

A simple color palette and patterns people already know from popular calorie and fitness trackers. New users know what to do from the first screen, with nothing new to learn.

Calorie ring
Calories left today, at a glance

Macro bars
Protein, carbs and fat progress

Streaks
A reason to come back every day

Center + button
One tap to log, from any tab

"?" explainers
Quick help without leaving the screen

03 Key features

Log meals

Scan a barcode with the camera or enter details manually to track calories and macros.

Log water

Track daily water intake right from the Home screen.

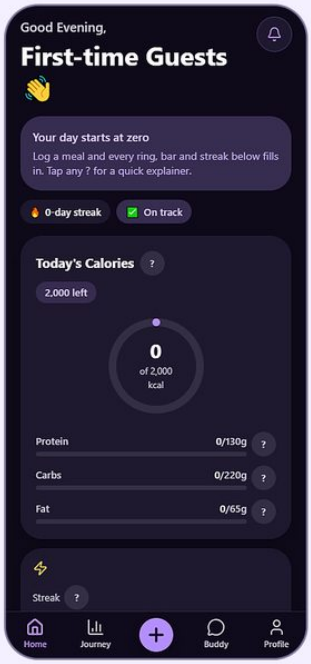

Daily goals

See calorie and macro targets, progress and streaks for the day.

Nutrition Buddy

An assistant to chat with for meal ideas, a custom nutrition plan based on goals, and motivation.

04 Key screens & design decisions

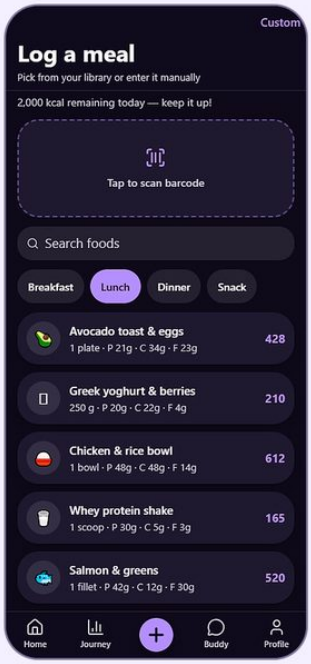

HOME

Everything that matters, on one screen

Home holds the key information: the daily goal, calories left, macros and streak, plus quick ways to log water and meals.

A friendly empty state, "Your day starts at zero", tells first-time users exactly what to do.

LOG A MEAL

Logging in seconds

The center + button opens this screen from anywhere. Users scan a barcode with the camera, or search, pick and enter details manually.

Meal filters and per-item calories and macros keep tracking fast and clear.

05 Visual identity

Calm, dark surfaces with one lavender accent, taken from the logo, keep attention on the numbers that matter.

Night	Surface	Raised	Logo violet	Lavender	Mist
#100B1B	#201A30	#372D4F	#9B6AFF	#AF8BFF	#ECEAF1

06 Outcome & next steps

What this project shows

- **Product thinking:** one daily loop of log, see progress, stay motivated
- **Familiar UX:** rings, bars, streaks and a center + button
- **AI feature design:** Nutrition Buddy for plans and meal ideas
- **Design to build:** a working prototype in Lovable in 40 hours

What I'd validate next

- Usability tests timing how fast people log a meal
- What happens when a barcode isn't found
- Goal-setting onboarding that feeds Nutrition Buddy
- A full WCAG audit of the dark theme's small labels
